The instruments of the PortableLab™ series are delivered in practical PortableLab™ cases that already contain all the accessories you need for measurements and calibrations, e.g. pipettes, containers, cleaning materials, buffer solutions and calibration solutions. Depending on how many instruments you put into one case, there is still enough room for your own material.

To guarantee safe transport, the cases are manufactured from lightweight but strong plastic and are lined with heavy-duty Styrofoam. Apart from the operating instructions, each case also contains a CD-ROM that not only offers helpful documents and the data transfer software, but also video-based «getting-started» tutorials.

Lab Power in
Your Hands!

PortableLab™

METTLER TOLEDO

PortableLab™ – Lab Power in Your Hands!

METTLER TOLEDO

Taking measurements on site or in the field has many advantages: You save time, you can make adjustments right away and you do not have to worry about transporting samples to the lab. But up until now, mobile measurements also meant a trade-off in features and ease-of-use.

METTLER TOLEDO has developed the PortableLab™ series of hand-held instruments to solve this problem. Despite their compact size, the Densito 30PX density meter, the Refracto 30GS (high-end) and the Refracto 30PX refractometers as well as the X-mate^{Pro} pH/multimeter offer the features you would expect from a large bench-top instrument: You get a wide array of configuration possibilities for perfect adaptation to your application; you can execute measurements with a minimum number of keystrokes thanks to the straightforward and intuitive user interface and you can save measurement data for later transfer to a Personal Computer (Densito and Refracto even over an IrDA infrared interface) and printer. All instruments are delivered in a practical and compact case that contains everything needed for successful on-site measurements – that is why we call it the PortableLab!

Oxygen, Brix, pH-value, refractive index, alcohol concentration, salinity, Oechsle, etc. – Thanks to exchangeable modules (Xmate^{Pro}) and flexible calculations and conversion tables (Densito/Refracto), the PortableLab™ instruments cover a huge application spectrum.

Refracto 30GS
portable high-end refractometer

Refracto 30PX
portable refractometer

Densito 30PX
portable density meter

X-mate^{Pro}
portable pH/multiparameter instrument
